

## **Teklad Global 18% Protein Rodent Diet (Sterilizable)**

**Product Description-** 2018S is a fixed formula, autoclavable diet manufactured with high quality ingredients and designed to support gestation, lactation, and growth of rodents. 2018S does not contain alfalfa, thus lowering the occurrence of natural phytoestrogens. Typical isoflavone concentrations (daidzein + genistein aglycone equivalents) range from 150 to 250 mg/kg. Exclusion of alfalfa reduces chlorophyll, improving optical imaging clarity. Absence of animal protein and fish meal minimizes the presence of nitrosamines. 2018S is supplemented with additional vitamins to ensure nutritional adequacy after autoclaving. **Also available certified (2018SC)**, the diet most commonly fed in Envigo Rodent Colonies.

**Ingredients** (in descending order of inclusion)- Ground wheat, ground corn, wheat middlings, dehulled soybean meal, corn gluten meal, soybean oil, calcium carbonate, dicalcium phosphate, brewers dried yeast, iodized salt, L-lysine, DL-methionine, choline chloride, kaolin, menadione sodium bisulfite complex (source of vitamin K activity), magnesium oxide, vitamin E acetate, calcium pantothenate, thiamin mononitrate, manganous oxide, niacin, ferrous sulfate, zinc oxide, riboflavin, vitamin A acetate, pyridoxine hydrochloride, copper sulfate, vitamin  $B_{12}$  supplement, folic acid, calcium iodate, biotin, vitamin  $D_3$  supplement, cobalt carbonate.

<sup>&</sup>lt;sup>a</sup> Ether extract is used to measure fat in pelleted diets, while an acid hydrolysis method is required to recover fat in extruded diets. Compared to ether extract, the fat value for acid hydrolysis will be approximately 1% point higher.

For nutrients not listed, insufficient data is available to quantify.

Nutrient data represent the best information available, calculated from published values and direct analytical testing of raw materials and finished product. Nutrient values may vary due to the natural variations in the ingredients, analysis, and effects of processing.

Teklad Diets are designed and manufactured for research purposes only.

Arginine

Tryptophan

<sup>&</sup>lt;sup>b</sup> Carbohydrate (available) is calculated by subtracting neutral detergent fiber from total carbohydrates.

<sup>&</sup>lt;sup>c</sup> Neutral detergent fiber is an estimate of insoluble fiber, including cellulose, hemicellulose, and lignin. Crude fiber methodology underestimates total fiber.

d Energy density is a calculated estimate of *metabolizable energy* based on the Atwater factors assigning 4 kcal/g to protein, 9 kcal/g to fat, and 4 kcal/g to available carbohydrate.

e Indicates added amount but does not account for contribution from other ingredients.

f 1 IU vitamin A = 0.3 μg retinol

<sup>&</sup>lt;sup>g</sup> 1 IU vitamin D = 25 ng cholecalciferol
